```cpp
template<class F>
void then(F && f){
 static_assert(Check_Assert<F>::value,
               "You can only call *then* right after
               calling operator(...), like this,
               para<> a;
               a[b]([](){...}).then(...);");}
```
